

Quantlab is an established, successful automated proprietary trading firm where talented minds go to attack interesting, challenging problems. We're different, both culturally and structurally, from a typical trading firm. The attitude here is collaborative, not cutthroat. Decisions are driven by science and technology. We trade our own money, so there's no selling. No customers. No distractions. Researchers focus on research. Technologists focus on technology. And brilliance is supported, celebrated and rewarded.

What we bring to the industry

At Quantlab, the pace is fast and rigorous. We're highly competitive, but never with each other. People work in teams, and individuals can shine. Here, whether you're a scientist, software developer or engineer, you can focus on what you do best, and do the best work of your career. You'll immerse in a continuous process of discovery with brilliant minds who will push you constantly to raise your own bar. And you'll get real-time, binary feedback—you'll see how your work impacts the bottom line, immediately, every day.

What we bring to the markets

We are in 48 markets worldwide and counting, with a nearly 20-year track record of consistent success, evidenced by headcount growth that has been steady and uninterrupted since year one. At Quantlab, we're proud of our performance, and we're hungry for more. We're driven to grow, as a company and as individuals, and we invite you to grow with us.
