
Vericimetry offers investment management services to the individual investor clients of independent financial advisors. We dedicate our time to building **quantitatively structured** investment strategies based on both rigorous academic research and proprietary quantitative research to achieve broadly diversified investment strategies. The strategy design is driven by the needs of financial advisors to have investment strategies that seek to enhance the current investment solutions of their clients.

To us, Vericimetry means “Quantitative Precision.” Deriving its name from the Latin word **verus** (“true”) and from Greek **syn-** (“with”) and **metron** (“measure”), Vericimetry™ \ˈver-ə-si-mə-trē\ utilizes a structured quantitative investment approach based on a set of defined fundamental characteristics to select a broadly diversified universe of eligible securities for an investment strategy.
