

Leading the way in alternative investments.

The USDR family-of-funds employ an event-driven strategy focusing on distressed and special situation investments.

USDR Investment Management ("the Firm" or "USDR") is an alternative asset manager that was founded in 2008. The Firm employs an event-driven strategy focusing on bankruptcies, stressed/distressed and special situation investments. The Firm capitalizes on the inherent market inefficiencies that occur in these "out-of-favor" and often overlooked alternative investment categories. USDR's proven strategy combines extensive legal and financial due diligence to achieve superior risk-adjusted performance. The intricacies of this investment space afford USDR a sustainable competitive advantage due to its special expertise and industry experience. Comprehensive due diligence is performed on all potential investments to determine probable investment outcome with a primary emphasis on downside asset protection. Expression of each of the firm's themes will require a level of knowledge and understanding that will allow for the funds to be more concentrated in their overall exposure compared to some of our peers. Although the strategy's core focus is on in-depth legal due diligence and fundamental bottom-up analysis, market conditions will dictate optimal distressed categories and investment vehicles. Since the Firm's inception they have managed investors' assets through a series of closed end vehicles.
