

THE BUSINESS OF SPACE

THE NEW SPACE RACE HAS BEGUN

Rapid Cost Reduction

First time around, space technology developed at government-level budget and pace. In the New Space Race, Silicon Valley-style cost reduction and development speed has been adopted by the top companies in the sector.

Multi-Industry

Industries from mining to shipping to aerospace are finding that space-based services offer a new and compelling value proposition. Space is no longer just the domain of government, science and telecom.

Militarization

There is a quiet arms race emerging between the US, Russia and China. It includes space - the new frontier. Defensive and offensive hypersonic missiles, and anti-satellite weaponry, are the beginning of this trend.

OUR SERVICES

FREE: Equity Research Service

We are an SEC-regulated Investment Advisor. We operate a free-of-charge Equity Research Service on the SeekingAlpha publishing platform.
