The **Morningstar Market Neutral Category** represents funds that attempt to eliminate the risks of the market by holding 50% of assets in long positions in stocks and 50% of assets in short positions.

Morningstar Long/Short Equity Category funds take a net long stock position, meaning the total market risk from the long positions is not completely offset by the market risk of the short positions. Total return, therefore, is a combination of the return from market exposure (beta) plus any value-added from stock-picking or market-timing (alpha).

Morningstar Options-Based Category represents funds that generate a significant portion of their returns from the collection of premiums on options contracts sold.
