Rempart Asset Management specializes in discretionary investment management for individuals, private corporations and foundations. Our firm takes a professional approach to diversified portfolio management that features discipline, a focus on quality, and conservative risk management.

It is Rempart's mission to provide steady performance with relatively low volatility. This is accomplished through a cash-flow oriented investment approach with research conducted by Rempart's investment professionals.

Rempart is a fully independent firm owned by its founding partners. Rempart emphasizes a disciplined team approach to the management of its clients' portfolios.

The Rempart team has worked closely together since 2003, with each of its five portfolio managers having several decades of investment management experience.

Rempart is headquartered in Montreal, Quebec, Canada, and has a branch office in Toronto, Ontario. The firm is duly registered as a portfolio management company with most of the provincial securities commissions across Canada and with the Securities and Exchange Commission in the United States. It also serves clients internationally.

At Rempart, we create investment portfolios tailored to the specific client and managed on a segregated basis. We do this by incorporating each client's unique circumstances into his or her own distinctive investment policy. Existing holdings, income requirements, tax considerations, time horizon and growth objectives are all taken into account in this process. We believe the individual circumstance of each investor is a key determinant in the portfolio construction process.

Investment portfolios are managed on a disciplined basis with two senior portfolio managers and a portfolio administrator involved with the management and service of each client portfolio.

[First Quarter 2019](#)

After the very weak performance by North American markets in the fourth quarter, particularly in December, equity markets have rebounded strongly. In spite of this, we continue to remain cautious. There is strong evidence that global economic growth is slowing. [...]

[Fourth Quarter 2018](#)

For investors, 2018 came to a merciful close on December 31st. With increasing volatility stalking the equity markets throughout the month of December, it ended with the worst performing year since the financial crisis of 2008-2009. Negative returns were delivered [...]
