[How To Invest \(/pages/how-to-invest\)](/pages/how-to-invest)

Clearly different.

We believe the Capital Advisors Growth Fund is different because it is designed for an unconventional model of how asset markets work. The foundation of our viewpoint is an expectation that risk markets will overshoot their long-term average value, in both directions, from time to time. The Capital Advisors Growth Fund employ rigorous fundamental analysis and quantitative disciplines to identify structural change and exploit overshooting prices in the asset markets.

Important Risk Information

Mutual fund investing involves risk, including the potential loss of principal. The Fund invests in foreign securities which involves political, economic and currency risks, greater volatility and differences in accounting methods. Growth stocks may be more volatile than other types of stocks and may perform differently from the market as a whole. The Fund may invest in derivatives, such as options, which involves risks different from, and in certain cases, greater than the risks presented by traditional investments.
